

### THE CHECKMATE SAFE ALONE APP PROTECTS YOUR EMPLOYEES 24/7

**No purchase of hardware or software required;** all that is needed is access to a phone, cellphone, or even a satellite phone to answer the CheckMate calls.

**Optional location tracking through GPS and text** for mobile lone workers aids in locating an employee in the event that they fail to respond to a CheckMate call.

**Easy setup and scheduling administration with the CheckMate Working Alone Dashboard.**

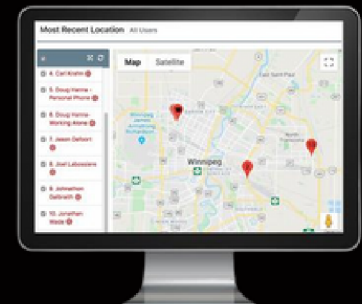

An audit trail is provided of all CheckMate calls, outcomes, and activity of schedules in real-time. Reports can be generated from the website dashboard or emailed weekly.

The **CheckMate Safe Alone app** provides protection at your fingertips, available to both Apple and Android users. Employees can check in, report an emergency, and speak to a professionally trained emergency monitoring representative with the touch of a button.

**Your employee safety is our top priority.**

*For a working alone solution to be successful it must be easy-to-use and flexible to meet both the administrator and lone employee's changing needs. CheckMate Working Alone streamlines the safety check and reporting process, making it easy for you to meet lone worker safety regulations.*
